Analysis & Design Software for Aluminium and Lightweight Structures Structural Engineering Software for Aluminium & Lightweight Structures For design of lightweight steel and aluminium structures, RFEM and RSTAB provides a large amount of cross-sections such as I-sections, channel sections, T-sections, rectangular hollow sections, square tubes, circular tubes, flat .

The many shapes and sizes of structural plate structures, BridgeCor, MULTI-PLATE, Aluminum Structural Plate and SUPER-SPAN, as well as their low cost and ease of installation, make them a mainstay for pedestrian and golf course bridges, overpasses, underpasses, and tunnels. Aluminium Structural Analysis opens with a chapter on loading, safety and design principles and includes a discussion of fatigue and fracture. This is followed by a series of chapters on particular components such as beams, beam columns and plate girders which .
